Table 3. Highest-Concern Disclosure Criteria Overall and by Neuromodulation Type (Top 6 Criteria) (IFU scoring matrix).

	All systems (n = 25)		DBS (n = 3)		SCS (n = 6)		VNS (n = 3)		RNS (n = 1)		Peripheral (n = 14)	
Criterion	**Total score**	**Systems scored 3**	**Mean**	**Scored 3**	**Mean**	**Scored 3**	**Mean**	**Scored 3**	**Mean**	**Scored 3**	**Mean**	**Scored 3**
2. Transparency Reporting	75	25/25	3.00	3/3	3.00	6/6	3.00	3/3	3.00	1/1	3.00	14/14
14. Control Over Targeted Advertising	75	25/25	3.00	3/3	3.00	6/6	3.00	3/3	3.00	1/1	3.00	14/14
1. User Notification About Third-Party Requests	74	24/25	2.67	2/3	3.00	6/6	3.00	3/3	3.00	1/1	3.00	14/14
8. Privacy by Default	74	24/25	3.00	3/3	3.00	6/6	2.67	2/3	3.00	1/1	3.00	14/14
11. User Control Over Data Collection	74	24/25	3.00	3/3	3.00	6/6	3.00	3/3	3.00	1/1	2.93	13/14
12. Data Retention	74	24/25	3.00	3/3	3.00	6/6	2.67	2/3	3.00	1/1	3.00	14/14
13. Data Control	74	24/25	3.00	3/3	3.00	6/6	3.00	3/3	3.00	1/1	2.93	13/14
22. Security Over Time	74	24/25	3.00	3/3	3.00	6/6	2.67	2/3	3.00	1/1	3.00	14/14

The top 6 criteria are those with the highest total scores across all 25 systems (maximum total 75); they were identified from the full cohort and were not recomputed separately within each neuromodulation type. Mean = mean disclosure concern score per system (1 = low, 3 = high); Scored 3 = number of systems scoring 3 / number of systems of that type. Systems labeled SCS, Peripheral are counted in both the SCS and Peripheral groups. DBS, deep brain stimulation; SCS, spinal cord stimulation; VNS, vagus nerve stimulation; RNS, responsive neurostimulation. Because 6 criteria share the 6th-ranked total score (74), 8 criteria are shown; the additional criteria (ranked after the 6th by number of systems scoring 3) are: 13. Data Control, 22. Security Over Time.
